ABSTRACTED-PUB-NO: SU 1837303A

BASIC-ABSTRACT:

Data from peripheral devices pass along a reading bus to a data register (5) and an interruption processing unit (2) sets the status of levels of priorities of requests of peripheral devices according to addresses formed by an exchange control unit.

A register (7) forms process command codes of data and sub-addresses and a decoder passes numbers of codes of the peripheral devices. To exchange data from a remote electronic computer, an assigned protocol is carried out.

USE - Connection of electronic computers to peripheral devices. Bul.32/30.08.93
